

15-Minute Check-In Card

Every 15 min, fill one row from the LIVE Board. Then read the decision rule below. Log the same numbers into the dashboard after.

MIN	NEW ENTRIES (SINCE LAST)	CONCURRENT	COMMENTS (SINCE LAST)	PRODUCT CLICKS	ORDERS (SINCE LAST)	GMV (SINCE LAST)	PINNED PRODUCT	NOTE
15								
30								
45								
60								
75								
90								
105								
120								

0–15 min · Active push

Broad auto-distribution. First 1–2 min weighted most. Come in hot.

15–60 min · Learning

Algorithm reads enter/leave, comments, shares, clicks, early sales.

60+ min · Adapting

Sends targeted audience. Momentum keeps you in rotation; engagement drop drops you.

STAY

Entries flat or rising across the last 3 checks (even if concurrent is flat). Keep going — the algorithm is still investing.

SWAP / CHANGE FORMAT

Concurrent stable but orders stalled 2 checks, OR check-in CTR (clicks ÷ entries) < 3%, OR same pin up > 18 min. Swap product, run an engagement bomb, change the segment type (demo→Q&A→giveaway).

END ON A HIGH

Entries AND GMV down 3 checks in a row AND you already tried a swap without recovery. Run best closer → pin comment with top 3 products → end with cards live (residual sales = 15–30%).

Benchmarks: Avg watch time >3 min = sweet spot (<90s = problem). Product CTR <3% → fix pin/CTA. Comments/order 15–30 healthy. For You >40% = earning reach. Follower conversion 3–5%. Engagement bomb every 8–12 min; format change every 12–18 min. **Never end-and-restart before minute 60.**
